Weekly Report

Week 22 — July 13–17, 2026

Mithun Manjunatha — Sales Engineer

Open Exchange | Confidential

Week 22 Overview

Week 22 opened with Joe formalizing OE's AI-native engineering strategy, a hybrid solutions-engineer/forward-deployed-engineer role, a shared knowledge base, and MCP rollout, while the sales side introduced Saeed covering for Daisy's maternity leave and closed strong Q3-opening deals. Migration work advanced on three fronts: Indeed's pre-migration report neared completion, the Okta CircleHD kickoff moved into detailed taxonomy planning, and a new Panopto-to-Zoom prospect, Apex Technical, began discovery. The week's biggest disappointment was losing candidate Ash after he initially indicated he'd accept the associate SE offer, triggering a redesign of the hiring process and a broader conversation about team reporting structure that ultimately confirmed Devin stays separate from the Joe/Chiwe engineering track. A one-off but time-consuming distraction was building out Zoom meeting infrastructure for American Idol's auditions, which also became a live example of the productize-repeated-manual-work philosophy Joe is pushing. *Covers Monday–Thursday; Friday was still in progress at time of writing.*

AI-Native Engineering Strategy Takes Shape

Joe's strategy document formalized the hybrid solutions-engineer/forward-deployed-engineer role and the "build twice, productize thrice" rule for turning repeated manual workarounds into real product features, discussed at length across three separate sessions with Chiwe, Devin, and Andrew/Amelia.

Hiring Process Redesigned After Losing Ash

Candidate Ash's surprise decline, after initially indicating he'd sign, prompted a full rework of the associate SE hiring funnel: knockout questions reviewed first, then a case study, then a single culture-fit interview, to reduce wasted cycles on candidates who won't ultimately accept.

Migration Pipeline Diversifies Beyond Video

Alongside Indeed's near-complete pre-migration report and Okta's CircleHD taxonomy planning, Apex Technical (Panopto) and Coupa (Goldcast) both entered active discovery and pricing this week, broadening OE's migration business past pure Kaltura-to-Zoom work.

Support Line Monetization Strategy Crystallizes

With engagements running multiple hours on things like HubSpot integration troubleshooting, leadership drew a clear line between free trial-period support and paid professional-services work, while pushing hard for more volume to demonstrate value to Zoom before the pilot period ends.

Note: Created in tandem with AI to summarize meeting notes. Every line read and verified.

Monday, July 13

7 meetings

Indeed Pre-Migration Report Progress and Kaltura-to-S3 Discovery Approach

Akash reported the Indeed pre-migration report has everything requested except embed codes, which fetch successfully but add roughly 10 hours of runtime across ~6,900 entries. The team agreed to migrate Kaltura content to S3 first and generate reports from the cached JSON rather than re-querying Kaltura live for every report iteration.

AI-Native Engineering Strategy Walkthrough

Joe walked Mithun, Chiwe, and Nathan through a formal strategy document reframing OE's engineering culture around agent-assisted development, a queryable knowledge base, and MCP rollout, introducing the hybrid solutions-engineer/forward-deployed-engineer role. He proposed a build-twice-productize-thrice rule and floated tracking POC-to-product conversion and cycle time as the team's first KPIs.

Quick Follow-Up with Chiwe on Onboarding and Roles

Mithun offered to raise open role-clarity questions directly with Andrew and Amelia, and Chiwe confirmed he's open to that. They also discussed collecting product ideas more systematically during delivery-team meetings.

EMEA/Institutional Weekly Sales Call

Andrew's team opened Q3 with new hire Saeed covering for Daisy's maternity leave, alongside a strong two-week start (\$408K against a \$1.6M target) driven by Kara's Intuit (\$180K) and Databricks (\$120K) closes. Institutional highlights included JPMorgan's contract expanding from \$2M to \$3.75M.

IFRS/Zoom Technical Sync — iFrame Channel Bugs and Final Migration Timeline

Zoom's Stefan and Fan walked through fixes shipping in the weekend's July release, including the iframe embedded channel setting finally covering both old and new event-build workflows. The group locked the final IFRS migration mapping timeline ahead of Kaltura access ending.

Indeed/Skyler Weekly Check-In

Skyler, back from PTO, confirmed the Kaltura service account is working well for API-based discovery, and committed to sending the exact Zoom role permissions needed by end of day. The main open item remains the ownership-mapping report.

Panopto/Community College Discovery Call

Mithun and Kara priced a Panopto-to-Zoom migration for a technical/trade college (18TB, 3,500 videos, an estimated \$23-27K) using a grant that must be spent by year-end. The discovery call covered Canvas LMS folder-based access control organized by curriculum.

Tuesday, July 14

8 meetings

Citi S3 Test Bucket, DevOps Process, and Migration Bot Split

Joe clarified the team will never get direct AWS Secrets Manager access and should follow the existing key-sharing process; the group agreed that going forward, external file access should go through SFTP rather than direct S3 access. Akash and Kiran confirmed they'll split the migration bot's Kaltura-side and ZVM-side work into parallel tracks.

Ash Role-Clarification Call

Mithun answered candidate Ash's questions about the associate SE role's mix of engineering versus customer-facing work and OE's work-life balance. Ash indicated his main concern was work-life balance, not compensation, and said he'd decide by noon.

IT/Support Standup — Laptop Retrieval and EuroOps Onboarding

The team debated how long to chase down laptops from departed employees before filing a police report, landing on a stronger explicit warning in separation letters instead. They also clarified the reactivation process for a European contractor group ahead of a BMW event.

Workato Enterprise MCP & Renewal Call

Mithun and Max walked Workato's team through the Zoom Contact Center integration use case, and Workato clarified the distinction between Arrow (their AI copilot) and Enterprise MCP (custom MCP servers), the latter not something OE currently has. The team decided to renew on the existing Business Edition.

Ash's Decline Discussed with Chiwe, Nathan, and Annalisa

The group was surprised Ash declined after seemingly indicating he'd accept, theorizing a last-minute counteroffer. They agreed to restart the pipeline with a redesigned process and to prioritize East Coast-based candidates going forward.

Okta CircleHD Weekly Check-In

Andrew gave Mithun and Max a guided tour of Okta's flat, 137-channel CircleHD structure. The team confirmed Zoom Clips supports in-place media replacement without breaking existing embed links, and the next weekly call moved from Tuesday to Friday due to Okta's team offsite.

Hybrid Role Strategy Walkthrough with Devin

Joe and Chiwe explained the hybrid SE/forward-deployed-engineer concept directly to Devin, framing his current role as adjacent but distinct. Devin raised early questions about where he personally fits, prompting Joe to reassure the team that mistakes are expected in this new way of working.

Apex Technical (Panopto) Scoping, Canvas Deep-Dive, Coupa, and American Idol

Kara, Max, and Mithun brought in Zoom's Andrew to clarify Canvas LMS deep-linking, surfacing that individually-embedded course videos could require a much larger manual remapping effort. The same

session priced Coupa's migration package, and Kara handed Mithun the American Idol Zoom spreadsheet.

Wednesday, July 15

5 meetings

Chiwe 1:1 — IFRS Report, Ash's Decline, Hiring Redesign, Devin, AI-Tooling Ideas

Mithun and Chiwe confirmed the hiring process going forward, knockout questions first, then case study, then a single interview, and agreed a candidate who can't explain their own resume is a hard red flag. They also brainstormed an AI video-editing assistant and an American Idol Zoom-setup agent.

Akash JIRA/Ticket Cleanup Standup

Mithun worked through outstanding JIRA tickets with Akash, closing out ZCM186 (cultural findings) and clarifying the still-unstarted Okta S3-to-S3 ticket needs a scheduled call with Zoom before Kiran's team can proceed.

Kara Personal Catch-Up and American Idol Zoom Setup Walkthrough

Kara walked through the full American Idol Zoom setup requirements: 21 main-room audition sessions, a recurring Winner's Circle meeting, alternative hosts, and breakout-room lists. Mithun committed to a same-day turnaround.

Devin 1:1 — Reporting Clarity, KPI Idea, Okta Playbook, IFRS Venting

Devin confirmed with Amelia that he won't report into Joe or Chiwe and will stay focused on sales enablement. They discussed building Devin a personal KPI-tracking dashboard and reviewed a draft playbook document for Okta.

Server-to-Server OAuth Setup with Brian (IT)

Mithun walked Brian through creating a server-to-server OAuth app for the American Idol producer account, discovering the account needed an explicit Zoom Developer role before the app-creation option would appear.

Thursday, July 16

5 meetings

Akash/Kiran Standup — S3/Bot Progress, IFRS Poll Timing, Missing-Video Discrepancy

Kiran reported the Kaltura-to-S3 fetch for Indeed is roughly 80-90% complete, and Akash reported similar progress on the migration bot. Akash flagged 86 videos on permanent hold versus the 28 Zoom's Fan had cited, a discrepancy left for Max to resolve once back.

Max/Mithun Call — American Idol OAuth Follow-Up, Missing-Video Reconciliation

Max, recovering from knee surgery, confirmed general OAuth apps were the correct approach for American Idol but flagged they should be deactivated once done. He clarified the 86 permanent-hold videos are unrelated to the 28 sync-issue videos Zoom's Fan flagged.

Zoom Support-Line Weekly Call

The team debated when free trial-period support crosses into a billable engagement, citing a multi-hour HubSpot-integration call as an example that should have been monetized. Amelia pushed for higher volume in the meantime, and the team confirmed Q3 is off to a strong start.

Coupa Scoping Call with Josh

Mithun and Josh, a newer AE, built Coupa's full proposal live on the call: regional training, seven branded Webinars Plus events, and a 50-video Goldcast-to-Zoom migration.

Andrew/Amelia Q2 Review and Strategy 1:1

Mithun and Andrew reviewed Q2 KPI highlights and discussed a lost CMS migration deal where the client cited complexity as the blocker; Amelia proposed exploring a model where Zoom subsidizes migration costs. They confirmed Mithun's associate SE track stays under Joe/Chiwe while Devin remains separate under Amelia/Andrew.

Looking Ahead / Action Items

Close Out Indeed Ownership Mapping — Akash / Indeed Team

Get the channel-to-owner mapping report from Indeed's stakeholders, still pending as of Monday's check-in.

Resolve IFRS Video Discrepancy — Max / Akash

Reconcile the 86-permanent-hold vs. 28-sync-issue video counts once Max is back, and get Zoom's Stefan and Fan the corrected report.

Restart Associate SE Pipeline — Mithun / Chiwe

Begin interviewing fresh candidates using the redesigned case-study-first process, prioritizing East Coast-based applicants.

Finalize Okta and Coupa Proposals — Mithun / Josh

Send Okta the requested playbook document and finalize Coupa's pricing for training, 7 events, and the 50-video migration.

American Idol Zoom Setup — Mithun / Brian

Complete the remaining Zoom link and breakout-room configuration ahead of the August 25th audition start, and deactivate the OAuth apps once done.
