Weekly Report

Week 13 — May 11–15, 2026

Mithun Manjunatha — Sales Engineer

Open Exchange | Confidential

Week 13 Overview

Week 13 ran on three parallel tracks: resolving the last technical blockers ahead of the IFRS Kaltura-to-Zoom migration scheduled for Monday May 18, moving Indeed from proposal stage to a confident client with leadership-ready materials in hand, and formalizing OE's integration pricing model through the Arziant/Baker RFQ. The ZCM team confirmed agenda slide extraction and diagnosed a video category assignment bug as a patch-level fix that does not require re-uploading content, keeping the Monday start intact. The Indeed discovery call on Thursday delivered a live walkthrough of the ZVM environment, channel structure, and migration report that Skyler Fitzpatrick described as 'perfect' and immediately circulated to leadership. The Arziant RFQ response was submitted before the May 15 deadline with a new tiered CSM pricing model and a \$3K per integration template that is now reusable across all future RFQ responses. Wide-ranging conversations with Casey and Devin throughout the week surfaced a coherent earnings automation product concept — script generation, teleprompter, auto-editing, and retail investor sentiment analysis — representing the clearest product extension beyond events and migrations that has emerged so far.

IFRS Migration Start Locked for May 18

The week resolved all remaining pre-migration technical open items. Akash confirmed agenda slides are extractable from Kaltura via the thumb queue document path and transfer cleanly to Zoom's resources folder. A category assignment bug was discovered mid-week during the first post-categories-feature standup: all 232 account-level categories were being applied to every video rather than the categories associated with each specific entry. Joe and Max diagnosed this as a per-entry filtering fix that requires only a metadata patch call, not a re-upload. Max will write the ticket and Akash will apply the fix before Monday. IFRS has a hard deadline to cut its Kaltura license, making the May 18 date non-negotiable.

Indeed Proposal Converts to Confirmed Engagement

The Thursday discovery call completed the Indeed sales cycle. Skyler Fitzpatrick sent a detailed deliverables email on May 6 asking for confirmation of scope across 10TB of content, 150 publishers, embed inventory for Confluence, Degreed, and Huddle, and a 30-day post-migration support window. Mithun responded with a comprehensive phase-by-phase breakdown and invited a live walkthrough. The call delivered exactly that — ZVM environment structure, channel and permission configuration, and the sample migration report — and Skyler's response was immediate: 'This is perfect, thank you.' Materials were circulated to leadership the same day.

Integration Pricing Playbook Formalized

The Arziant/Baker Media RFQ — a company publishing American Banker and National Mortgage News that is moving from Cvent to Zoom Events and Webinars Plus — forced OE to build a repeatable pricing structure for integration services for the first time. Across two working sessions with Kara, Max, and Amelia, the team aligned on \$3K per integration for setup and onboarding with \$500 per year for maintenance, a \$100K contract threshold for bundled dedicated CSM support, and \$3,500 to \$5,000 per month for CSM access below that threshold. The RFQ response was submitted May 15 with a discovery-first cover letter explaining that exact event support pricing requires a

follow-up conversation.

Earnings Automation Concept Takes Shape

Back-to-back conversations with Casey (OE delivery) and Devin throughout the week produced the clearest articulation yet of a potential OE product extension: an end-to-end AI-powered earnings call platform. The concept covers script generation from financial API connectors, live teleprompter (Casey currently operates one manually), OE production delivery, post-event auto-editing and clip extraction, and retail investor sentiment analysis pulling from Reddit and X. Devin confirmed internal appetite exists and that both S&P; Capital Access and Computershare have infrastructure OE could build on rather than starting from scratch. Lorna, a former Credit Suisse investor relations executive now consulting for OE, will validate the Computershare partnership direction.

Note: Created in tandem with AI to summarize meeting notes. Every line read and verified.

Monday, May 11

4 meetings

ZCM Weekly Standup — Internal

The migration team opened the week reviewing the Kaltura agenda file retrieval problem. Max created ZCM-133 to track investigation into how agenda slides can be consistently extracted from the Kaltura API, noting they had been surfacing as thumbnails rather than standalone files. The IFRS client migration targeted for May 18 remained on hold pending a response from Priya confirming the go-ahead; Mithun confirmed no reply had been received. The team also worked through setting up Dashlane password manager access for the India dev team so admin credentials for the Kaltura integration could be shared securely. SE: ZCM-133 moves the last pre-migration blocker forward; Dashlane setup removes the manual credential handoff risk before IFRS go-live.

Pharma SDK Discovery — Internal (Peter + Mithun)

A pharma company called Menarini, with a global market cap of \$46 billion and an APAC entity at \$66 million, wants to embed live Zoom webinars into a marketing portal in the Philippines via the Zoom Meeting SDK. Their Korean dev partner is building the website on Drupal or WordPress. Mithun assessed the project as technically feasible at \$20K–\$340K depending on scope, but raised concerns about maintenance ownership and OE's lack of prior SDK delivery precedent. Peter resolved to message Amelia about capability direction. Amelia later confirmed this is not OE's lane at this stage. SE: Menarini was a useful capability boundary test — Amelia's clear guidance prevents OE from overcommitting on unfamiliar SDK work.

Monday OE All-Hands — Internal

The company reviewed a record prior week of 1,300 delivered events across capital markets (550), corporate services (269), conferences (75), and OE Connect (360). Christian and Jamie shared learnings from the LSEG Investor Relations Masterclass, including that 85% of buy-side analysts require at least two meetings before investing and that IR teams feel they are flying blind on messaging reception. Kara recapped an on-site delivery at Flextronics in Austin where the company announced a split into two entities, doubling potential event opportunities. Mithun shared that OE won its first investor day through a Computershare referral, set for mid-June. GCS pipeline stood at \$39 million with Goldman Sachs showing genuine interest after the latest dry run. SE: The Computershare investor day win validates the Zoom partner referral motion.

Baker Media RFQ Working Session — Kara + Mithun

Kara and Mithun reviewed an RFQ from Baker Media, publisher of American Banker and National Mortgage News, migrating from Cvent to Zoom Events and Webinars Plus. The document asked for pricing on five integrations — Ometa (direct, no Zapier), Salesforce, HubSpot/Marketo, Sessionboard, and a CMS migration — plus a dedicated customer success manager. Mithun proposed pricing each integration at \$3,000 setup plus \$500 per year maintenance, citing the Cargill precedent. He flagged the no-Zapier requirement as unusual and pushed for a discovery call before finalizing. Total Zoom licensing is approximately \$107K, leaving roughly \$143K headroom under the \$250K ceiling. SE:

Pricing integrations individually at \$3K/\$500 sets a repeatable template for future RFQ responses.

Tuesday, May 13

8 meetings

ZCM Standup — Agenda Slides Confirmed, JSON Roadmap

Akash updated ZCM-133 confirming agenda slide files are extractable from Kaltura's API and matched Max's prior findings. Max shared that Zoom is targeting a June release to support compressed file uploads to the content library, giving OE a clean path to bulk-dump JSON files into the hub after primary video migration. Max also flagged a Zoom thumbnail cap of five per video; since some Kaltura entries return six objects, the team needs to filter by object type to avoid triggering that error. SE: ZCM-133 is now unblocked and the June compressed file enhancement removes the last major technical unknown for IFRS delivery.

Migration Bot Development Review — Akash + Mithun

Akash walked Mithun through the current chatbot state: it can query Kaltura for a file list and is in progress on retrieving full metadata and attachments alongside each video. Mithun proposed shifting the UX from listing all files to asking what the user wants to exclude, with date range, tag, or title as filter criteria. SE: The exclusion-first UX pattern reduces cognitive load for large libraries and moves the bot toward an enterprise migration tool.

Weekly SE + Partnerships Check-in — Amelia, Devin, Mithun

Amelia and Devin debriefed on an S&P; Capital Access meeting, noting S&P; likely holds the largest IR CRM in the US and that a combined OE–S&P; analytics offering could be powerful. Amelia flagged the Bullish acquisition of Aquinity for \$500 million as reshaping the transfer agent competitive landscape. Mithun updated the group on active CMS pipeline: Indeed, Okta, HubSpot, Arziant, University of Ottawa. Amelia requested a weekly email report from Mithun on open CMS and integration opportunities. Salesforce dashboard ticket has been open six weeks with no resolution. SE: Amelia's weekly CMS pipeline request establishes a formal reporting cadence making the integration business line visible to leadership.

ZCM Migration Strategy Review — Joe, Max, Mithun, Akash

Joe joined for an IFRS migration status check ahead of May 18. Max reported the agenda slide retrieval path had been found but Joe raised concern that inferring slide identity from thumbnail count is fragile at scale. Zoom has hired a new migration specialist formerly ten years at Panopto who will be OE's dedicated technical contact. Joe asked to be removed from the IFRS PM email chain. Target extraction start remains Monday May 18. SE: A Zoom-side migration specialist with Panopto background gives OE a more qualified counterpart for the edge cases surfacing in the IFRS dry run.

Arziant RFQ Pricing Strategy + Indeed Prep — Kara, Max, Amelia, Mithun

The group tackled the dedicated CSM line item newly added to the Baker Media RFQ. Amelia proposed a tiered model: clients contracting over \$100K annually receive CSM-level support bundled; below that threshold, clients pay \$3,500–\$5,000 per month. Kara confirmed Zoom's base licensing for Baker at approximately \$120K, leaving roughly \$130K of headroom under the \$250K ceiling. The

session closed with quick Indeed call prep: Max will build demo channels and run ownership remapping, Mithun will present the agenda and dummy migration report. Kara noted Okta onboarded in three days despite projections of months, though no contract has been sent yet. SE: The \$100K CSM bundling threshold is a reusable model for all future integration deals.

Max + Mithun — Indeed Pre-Call Sync

Quick sync to confirm tomorrow's Indeed flow. Max was still awaiting Zoom technical support time for his support line project. The presentation sequence was confirmed: implementation plan walkthrough, Max handles Zoom user onboarding and hub structure, Mithun closes with the dummy migration report, then open Q&A.; Expected run time 30 minutes. SE: A confirmed agenda the evening before ensures the Indeed call opens structured rather than improvised.

Casey 1:1 — Earnings Automation Concept

Mithun and Casey mapped out a potential end-to-end AI-powered earnings call platform. Mithun proposed reverse-engineering the flow from go-live backward: script development from financial data via API connectors, rehearsal mode, OE production delivery, post-event clip extraction, and retail investor sentiment analysis from Reddit and X. Casey demonstrated his live teleprompter workflow, scrolling the script and adjusting pace in real time. Mithun suggested teleprompter as a \$500 add-on or bundled at a spend threshold. SE: The earnings automation concept — teleprompter, script generation, auto-edit, and retail sentiment analysis — is a differentiated product wedge that extends OE beyond event delivery.

Devin 1:1 — IR Analytics and Partnership Strategy

Mithun and Devin compared notes on the IR analytics product concept. Devin confirmed internal appetite but noted S&P; and Computershare both have infrastructure OE could build on top of. Lorna, a former Credit Suisse investor relations executive and president of the Swiss IR Society, was brought on as a consultant to shape the Computershare partnership direction. Mithun added himself to Salesforce as a pre-sales engineer during the call. SE: Lorna's involvement gives OE a credentialed IR practitioner to validate the Computershare analytics product direction before committing development budget.

Wednesday, May 14

2 meetings

ZCM Wednesday Standup — Slide Transfer Approach Confirmed

Akash presented the finalized agenda slide migration approach: the bot downloads the PowerPoint file directly from Kaltura and stores it in S3, then uploads it to Zoom's resources endpoint. The logic is coded and ready to test against the IFRS Kaltura account. Max confirmed Zoom's category fields are now visible following a fix deployed earlier in the week. JSON files remain an open item but will not block the Monday May 18 migration start — they will be handled as a follow-up batch in mid-June after Zoom's compressed file release. SE: All technical blockers for the May 18 IFRS migration start are resolved; the June JSON dump is documented as a planned follow-on step.

Arziant/Baker RFQ Final Pricing Review — MK, Kara, Max, Mithun

The team finalized the Arziant RFQ response before the May 15 deadline. Given the \$250K ceiling and Zoom's base licensing at approximately \$120K, OE's contribution was presented as a range with a cover letter explaining pricing depends on the level of one-on-one event support required. Integration support was set at \$3K per integration. Technical onboarding was raised from \$900 to \$2,000. CMS migration was listed at a \$9K–\$50K range. The group targeted a total OE number with a two in the front to stay competitive on the shortlist while leaving room for discovery in the next round. MK agreed to work with the RFP team to draft cover letter language and submit today. SE: Coming in under the threshold with a discovery-first cover letter is the right play to reach the shortlist.

Thursday, May 14

4 meetings

ZCM Thursday Standup — Agenda Slides Verified, Category Bug Found

Akash confirmed a successful first end-to-end test: the PowerPoint agenda slide file (4 slides) was extracted and transferred cleanly to Zoom's resources folder. Max verified all slides look correct in Zoom. However, the team discovered a category assignment bug: all 232 account-level categories were being applied to every migrated video rather than only those associated with each specific entry. Joe joined and confirmed this is a per-entry filtering bug. The fix is a targeted metadata patch call that does not require re-uploading any video files. Max will write the ticket and Akash will apply the fix before Monday. Monday May 18 migration start remains firm. SE: The category bug is patch-level and does not affect Monday's start.

Indeed Discovery Call — Skyler Fitzpatrick, Jacob Bennett, Cara Dingenthal, Max, Mithun

The team delivered a live walkthrough of the ZVM environment covering channel and playlist structures, permission tiers, and the publisher experience for Indeed's 150 content publishers. Mithun presented the sample migration report and the full implementation plan covering the 10TB Kaltura-to-ZVM scope: dry run gate, embed inventory for Confluence, Degreed, and Huddle, ownership remapping, and 30-day post-migration support. Materials were sent over the same day for Skyler to circulate to leadership. Skyler's response: 'This is perfect, thank you.' SE: Indeed is now fully aligned on scope with leadership-ready materials in hand — the next step is contract.

Zoom Sales Weekly — Emilia Tapsall

Standard weekly Zoom partner sync. No noteworthy items to report.

Mithun Weekly Check-In

Skipped this week.

Friday, May 15

1 meeting

Max + Mithun — End-of-Week Catch-Up

Brief sync to close out the week. Mithun was largely off Friday. The IFRS migration is confirmed for Monday May 18. The Arziant RFQ was submitted. The Indeed discovery call delivered strong outcomes. No blocking issues heading into Week 14.

Looking Ahead — Week 14 / Action Items

IFRS: Live Migration Begins Monday May 18

Max and Akash begin the full Kaltura-to-Zoom extraction and upload. Category patch to be applied before first batch runs. Max to coordinate with Fan Wang on progress check-ins and keep IFRS team informed. Owner: Max, Akash.

Indeed: Send Contract

Skyler has materials and leadership sign-off in progress. Cara to send the contract this week and confirm timeline for kickoff. Owner: Cara, Mithun.

Weekly CMS Pipeline Report to Amelia

First weekly email report on open CMS and integration opportunities due start of week. Include Indeed, Okta, HubSpot, Arziant (shortlist pending), University of Ottawa, and any new inbound. Owner: Mithun.

Salesforce Dashboard Access

Follow up with Diana and Ali on pre-sales engineer permissions and dashboard build. Devin has been waiting six weeks. Mithun needs visibility into closed-won opportunities he has influenced. Owner: Mithun, Devin.

Arziant/Baker Shortlist Decision

The RFQ closed May 15 and shortlisting to three to five vendors is next. Monitor for a response from the Baker/Zoom team and be ready to schedule a discovery conversation quickly. Owner: Kara, Mithun.
