# Weekly Report

Week 9 — April 13–18, 2026

Mithun Manjunatha — Sales Engineer

Open Exchange | Confidential

## Week 9 Overview

Week 9 was the week the migration practice gained real institutional weight and the AI tooling agenda moved from concept to working product. The IFRS migration cleared its final pre-run gate — ZVM API gaps documented, April 18th release confirmed as the unlock for tags and captions, post-release validation plan locked in with the client call scheduled for the following Thursday. Okta emerged as the largest migration opportunity yet, with a discovery call, debrief, and pricing debate all landing in the same week. Meanwhile two converging threads — the Open Montage video editor and the OE Central agent — both crossed into demo-ready territory. Mithun was formally introduced at the Q1 all-hands as the Zoom partnership SE, with CMS migration and marketing integrations named as the two new strategic growth lines. The week closed with Alan announcing OE's internal AI support agent going live and Opus 4.7 shipping mid-call on Friday.

### April 18th as the Migration Hinge Point

Every active migration thread — IFRS, Laurentian, Okta — ran through the April 18th Zoom release. Tag limits expanded (5 → 30, 20 → 40 chars), caption upload unblocked, and the SRT→VTT conversion completed. Monday's validation run on the first IFRS batch is the real test. The multipart upload part-size limit (confirmed hard at 100MB per part) was formally pushed back to Zoom for resolution. Joe's read: OE is still acting as Zoom's QA team.

### Okta as the Practice's First Enterprise Scale Deal

The Circle HD to ZVM migration for Okta landed in a single week — discovery call, post-call debrief, and pricing debate. At 130 channels, hierarchical restructuring, SSO via Okta push groups, chapter migration, and a hard mid-August deadline (Oktane conference), this is structurally the most complex migration scoped so far. Vijay confirmed S3-to-S3 transfer launching in April, which dramatically reduces infrastructure cost. Pricing converged around \$40K. Implementation plan and formal quote due Monday.

### Open Montage Crosses into Working Prototype

The earnings call video editor moved from idea to working demo across the week. Three versions built and tested against the CVS Health earnings call — rules-based, slides + moderator, and Claude Opus 4.6 timestamp-aligned — coming within three seconds of the original. The UI was built and deployed on Vercel by Friday with a 97% confidence score on the mock agent simulation, versioning history, XML export for Premiere, and Neon database wired in. Casey's full editor training doc and practice edit files are now in Mithun's hands to improve accuracy.

### AI Tooling Spreading Across the Organization

Alan announced OE's internal AI support agent (Copilot + Claude, full knowledge base) went live Friday — 50 historical tickets answered in minutes. Edgar on the production team is using Claude Code for client page builds. Peter built a Claude pricing tool for EMEA/APAC quoting in 10 minutes. Mithun built a migration pricing estimator and an OE Central agent concept framed for Cargill and Mark's internal request. Emilia gave Mithun explicit license to keep pursuing the AI and product work. The SE role is visibly evolving into something closer to AI GTM.

*Note: Created in tandem with AI to summarize meeting notes. Every line read and verified.*

## Monday, April 14

*5 meetings*

### **ZCM Migration Standup — Joe, Akash, Mithun**

The weekly ZCM standup with Joe leading. Infrastructure stood up and torn down in AWS US East 2 with no issues. ZVM API gap (no external media upload) confirmed as documented in ticket ZCM-79 and closed. Resource cleanup automation identified as the next open item — per contract OE cannot retain client data beyond a defined period and that automation does not yet exist. Post-April 18th plan: re-emit metadata for the first batch to validate tag fixes, targeting April 23rd, then ramp to 100–200–300 videos per day the following week.

### **OE Central API Exploration — Tomaso**

Mithun explored what OE Central data could feed an intelligent event-monitoring agent with Tomaso (OE product/engineering). Tomaso walked through the platform architecture: accounts contain events, which contain meetings with topics, presenter/host lists, and registrant counts. External API docs cover auth, attendee retrieval, and CRUD but do not yet include an endpoint to pull Zoom connection details by meeting ID. Tomaso directed Mithun to define the agent's data inputs first, then bring that list to Ali (internal integrations) and Connor (API lead) to clarify what is accessible internally versus externally.

### **OE Q1 All-Hands — Company Wide**

Company revenue came in at approximately \$10M, 93% of the quarterly target. Institutional delivered its best Q1 in five years at +19% revenue growth led by Goldman Sachs, Wells Fargo (+75%), JP Morgan (+39%), RBC (+35%), Bank of America (+33%), and UBS (+21%). GCS closed 99 deals totaling \$1.667M (167% of target) with 32 new logos. The Zoom partnership closed \$1.306M at 106% of quota. Six reps exceeded quota: Kaylee, Jules, Jamie, Kara, Brit Marinucci, and Canis. Emilia led a closed-loss analysis identifying ghosting and cost/budget as the top two loss drivers. Mithun was formally introduced company-wide as the Zoom partnership SE with CMS migration and marketing integrations named as the two new SE-led growth vectors.

### **Claude API Cost Review — Joe**

Joe flagged that Mithun's Claude API usage was running roughly double the rest of the team, attributed to Opus model use via fast mode and large accumulated context windows. Joe shared a structured multi-phase AI workflow: phase one uses a lighter model to extract structured JSON company facts, phase two feeds that output into Sonnet for scoring and outreach copy, with extended thinking disabled and context cleared between sessions. Mithun confirmed he had already switched off fast mode, disabled his three MCP servers, and would monitor usage going forward. Joe also suggested converting the workflow into a reusable skill triggered by company name and website alone.

### **SE Monday Sync — Emilia**

With Max out of town, Mithun is the primary Zoom contact for the week. A University of Ottawa migration RFP was submitted. IFRS was the most pressing issue: a Zoom sales rep had committed to IFRS in March that Kaltura slide content would be embedded into migrated Zoom videos, but this was agreed without looping in OE — creating a gap that now threatens the migration. The Okta migration is being scoped at approximately \$50K after Kara recommended increasing PM hours. Cargill was flagged as exploring a Microsoft Copilot agent on OE Central registrant data. Mithun previewed the video migration bot concept as a potential Zoom Marketplace SaaS product.

## Tuesday, April 15

*2 meetings*

### **ZCM Tuesday Standup — Joe, Akash, Mithun**

Two open items resolved. First, the ZCM ticket to evaluate the S3-to-S3 import flow — Mithun uploaded the missing technical document during the call. Joe clarified the architecture requirement: Zoom must physically move client data out of OE's S3, not simply read from it, since OE cannot retain client data permanently per contract. ZCM-39 (cleanup and tear-down with actual files) confirmed tested and working. Joe flagged a new ticket on the multipart upload part-number limit: Zoom's docs imply a 100-part cap. At OE's 100MB chunk size this creates a file size ceiling. Joe wants the team to reduce chunk size to force over 100 parts and see what error Zoom returns.

### **Devin Weekly Check-In — IR Agent & Open Montage Demo**

Commission structure discussion: both Mithun and Devin are receiving their first SE commission payouts. Cargill update: Jules and Connor sold OE Central data access to Cargill at \$3K setup plus \$500 annual maintenance. Mark asked Mithun to build the same thing internally. Mithun demoed Open Montage — a GitHub-based agent parsing VTT transcripts, classifying segments, keeping last takes, outputting a single MP4. Three versions built; the Claude Opus 4.6-powered version ran 26:27 against the original 26:30. Devin raised a security concern about pre-public earnings call data fed to Claude; Mithun flagged local model hosting as a longer-term option. Devin previewed the IR agent with analyst sentiment, predicted Q&A, and rehearsal mode — plans to show Alan Thursday. Thursday schedule set: Mithun, Devin, and Casey to walk through the video editor; Okta discovery call also Thursday.

## Wednesday, April 16

*3 meetings*

### **ZCM Wednesday Standup — Joe, Akash, Mithun**

ZCM-99 (increasing part count cap from 100 to 500) confirmed done. The team tested a 35GB file at approximately 120 parts and it uploaded successfully, suggesting the part-count limit is not 100. Joe recommended bumping the internal cap to 500 to find the real ceiling. A PR is up for peer review. April 18th release prep: tag character limit expanding to 40 characters. Changes to be tested Monday morning in test and sandbox accounts. Plan for Monday: rerun the 16 already-migrated IFRS entities through transform to re-patch tags; then create a new batch of five entities with captions for end-to-end caption validation. If both pass before the IFRS call the following Thursday, full migration begins at 200–300 entities at a time.

### **Salesforce Order Process Training — Ali (Sales Ops)**

Ali ran a company-wide Salesforce training. Core principle: opportunities represent pipeline; orders represent all confirmed revenue, and commission/quota tracking will run off orders going forward. Multi-event flow: close the opportunity, convert to order, mark as multi-event, create child orders (one per event), mark each as pending billing review. Standalone events follow the same flow without child orders. Add-ons must be created from the relevant child order and not marked pending billing review until after the event delivers so all add-ons reconcile into one invoice. Shannon confirmed delivery will not execute events without products itemized on the order. The call closed with a plan to automate a notification to sales reps when their event is marked delivered, prompting them to close any open add-on orders.

### **Michael Morales 1:1 — Claude SEO Tool Handoff**

Mithun walked Michael through the implementation guide for the Claude-based SEO workflow: runs Claude Code in terminal, spawns nine parallel agents, generates JSON content validating against Google requirements at zero cost versus AHrefs at \$900/month and SEMrush at \$117/month. Mithun flagged the new Claude desktop app as a lower-barrier entry point. Camden (new BDR) came up as someone to loop into Zoom-related content and lead follow-up. The conversation broadened into a discussion on where SaaS value is heading — Mithun's view is that the money shifts to the data aggregation and synthesis layer, not the UI.

## Thursday, April 17

8 meetings

### OE Q2 Delivery All-Hands

Annalisa led staffing data showing peak hours up 376% (9am–1pm EST) and 82 March connect meetings arriving under 48 hours notice, directly correlated with geopolitical activity. Carlos presented operator team expansion: Matthew Gibbs added on the west coast, a core team of six full-time operators joined February and touched approximately 500 events in under two months. Capital markets handled 294 events and 3,393 meetings, up 59% year over year. Goldman Sachs at 340 meetings (+128%), JP Morgan at 244 (+66%), 283 hotline calls, SpaceX IPO underway. Podium 2.0 rolling out across GCS. Casey's production team reported FreshService centralized, LucidLink enabling distributed editing, and Edgar flagging Claude Code as enabling complex client page builds.

### ZCM Thursday Standup — Joe, Max, Akash, Mithun

The chunk/part limit clarification: ZCM-99 (increasing part count to 500) is done. The open question is whether the part SIZE (100MB) can go higher. Plan: change configuration to 200MB, run a file over 2GB, observe the error. April 18th release reminder: tags expanding to 40 characters, to be tested Monday morning. Post-release plan confirmed: rerun existing IFRS batch to re-patch tags; create a new batch of five entities with captions for end-to-end validation. If both pass before the IFRS call next Thursday, begin full migration at 200–300 entities at a time. Max to grant Akash and Kiran sandbox hub access.

### Michael Morales Follow-Up — Implementation Guide

Short follow-up: a few button labels in the Claude SEO implementation guide were misleading (“watch” and “download” pointing to non-existent content). Michael confirmed he will update the first word of those buttons himself without touching underlying logic.

### Zoom Partnership Team Weekly — Pipeline Review

Two weeks into Q2: \$44K closed against a \$1.2M quota (4%), total pipeline \$525K. Andrew believed the real picture is healthier since known renewals like Databricks and Intuit are not yet in Salesforce. Emilia pushed for all known renewals at SQL stage using last year's revenue as a placeholder. Peter shared that a Zoom solution engineer covering APAC was impressed by OE's pricing and will start looping Peter into customer calls. Peter also demoed a Claude pricing tool he built in 10 minutes for EMEA/APAC quoting. Emilia had a call with Rajul and Tyler immediately after; Mithun contributed two asks: app submission support and guidance on bundling webcasting with migration for the education segment.

### Open Montage Video Editor Deep Dive — Casey and Devin

Mithun demoed all three Open Montage versions to Casey and Devin using the CVS Health earnings call. The Claude Opus 4.6 version came within three seconds of the target. Known error: when a speaker ends a sentence and the next take starts from the last three words, the agent misses the duplicate. Casey confirmed the tool is useful and would save meaningful production time. The full

workflow was mapped: gather files, agent processes, human editor reviews in Premiere, uploads to Novio for client review, live stream driver downloads the final MP4. FramelO discussed as an alternative for version replacement and direct download. Opus 4.7 released mid-call. Mithun asked Casey for a step-by-step workflow document to improve the next iteration.

### **SE Sync — Emilia**

Migration bot: Alan is excited after seeing it. Four steps remain — full development, managed service agent setup (cost), S3-to-S3 agreement with Vijay, and Zoom Marketplace submission. Mithun has deliberately held off telling Joe since Joe is a rigorous engineer and Mithun wants to come in fully prepared. Emilia's read on Zoom cannibalization: Zoom is focused on being a Teams competitor and would not prioritize a migration bot — OE building and listing it on the Marketplace is exactly what Zoom would want. On Open Montage: 90% accuracy, path to 95%. Emilia connected the video editor to Devin's IR platform as an end-to-end IR workflow and noted the delivery team has a parallel initiative to automate 30–40% of manual workload. Emilia told Mithun explicitly to keep pursuing the AI and product ideas.

### **Okta / Circle HD Discovery Call — Kara, Max, Mithun, Camden, Vijay, Kenneth, Andrew, Bri**

Full discovery call for the Okta migration from Circle HD to ZVM. Circle HD has approximately 130 flat channels with videos, transcript files, and some documents; no quizzes, polls, or interactive elements; chapters only for marquee events. Okta's desired end state: hierarchical channel structure by org and team, personalized content (Netflix-style), access control by org/team/level, single video assets shareable across channels, and embed support into Confluence, Cornerstone LMS, and their intranet. SSO via Okta push groups. Max outlined three to six months as a conservative timeline. Hard constraint: Okta's team is unavailable mid-August through end of September for their annual Oktane conference. Vijay confirmed S3-to-S3 transfer launches in April. MSA process to begin immediately: Kara sending W-9 today, Okta opening a Scout procurement ticket. Quote and plan due Monday.

### **Okta Post-Call Debrief — Kara, Max, Mithun, Camden**

Max's read: content itself is straightforward (flat channels, just videos and basic metadata) but channel restructuring and stakeholder coordination will drive PM hours. Chapter migration depends on Vijay building the required API. Pricing: original \$30K estimate to be raised to \$40–45K given PM hours for hierarchy design, stakeholder management, onboarding, and post-migration support. S3-to-S3 reduces infrastructure costs. Kara's direction: go high, send a detailed plan not just a number, by Monday. Mithun flagged wanting to understand Okta's dealbreakers (chapters, hierarchical structure, Cornerstone embedding) before the quote goes out. Kara to follow up with Adam (Zoom AE who owns the Okta account).

## Friday, April 18

5 meetings

### **ZCM Friday Standup — Max, Kiran, Mithun**

Akash was out. The 100MB-per-part limit was confirmed — same error returned when attempting to exceed that ceiling. Joe's message to Zoom: this is the second time OE has flagged this; if Zoom insists the limit is higher, they need to supply a technical resource who actually knows their own APIs. ZCM-37 (updating the transformer job to allow more than five tags) queued for early next week. Max has an end-of-day item to identify five new content pieces with captions for the end-to-end caption behavior test. SRT-to-VTT conversion done and verified on the IFRS branch. IFRS migration code updated with all latest changes. Everything staged for Monday morning.

### **Max + Mithun Internal Sync — Pricing Tool & Reporting Gap**

Mithun had built a Claude-based migration pricing tool overnight, taking the migration document and call transcript as inputs and outputting a rough cost estimate with notes for discount flags. Alan and Alex accepted the invite but neither joined. Max raised a reporting gap: as the IFRS full migration approaches, he is not confident that captions and attachments are being tracked with the same granularity as video files. The current report shows entity IDs with error notes but does not cleanly surface whether each caption or attachment succeeded or failed. Mithun described his understanding of the pipeline ledger and suggested asking Joe whether captions and attachments are logged at each step. Alan joined briefly to announce OE's internal AI support agent (Copilot + Claude, full knowledge base) is live — 50 historical tickets answered in minutes. Alan asked Max and Mithun to connect with Eric (the engineer who built it). Alan confirmed OE has a dedicated Zoom ISV support contact (Diana via Max) and told Max to push that resource hard.

### **Casey + Mithun Part 1 — XML Export Idea & Live UI Build**

Casey opened with an idea from Jeremy on his team: instead of the agent exporting an MP4, export an XML file that Premiere can import directly with all cuts pre-loaded in the timeline. Mithun agreed this fits the existing production workflow and eliminates the need for a bespoke video UI for basic corrections. Mithun explained agents to Casey — LLM plus autonomous loop plus tool set; Claude Code itself is technically an agent. Mithun then live-built the video editor UI using Claude Code with the Zero orchestrator agent, briefed with the full workflow context, deploying on Vercel with Neon as the database. Call ended with Mithun telling Casey he would call back once the build progressed.

### **Casey + Mithun Part 2 — UI Demo & Practice Edits**

Mithun called Casey back with the build further along: project queue with stage labels, 97% confidence score in 85 seconds, versioning history, source files, XML download, and Premiere XML download. One issue: the XML was exporting as HTML — needs reprompting. Casey confirmed Jeremy is fully on board with the assistant-editor framing (saves 30% of time, human still reviews). Casey shared his full editor training package: a zip with a real edit breakdown, workflow doc, script, and raw Zoom recordings, plus his step-by-step editorial workflow document. Casey described a production staffing tool concept — project type, task context, time estimates, and editor availability

feeding an LLM to recommend who to staff. Voice cloning/TTS was added to the Open Montage scope. Mithun demoed the Humework platform briefly — an agent that MCPs into a real human expert on demand. Opus 4.7 powering the latest build iteration.

### **Max + Mithun — Okta Quote & Implementation Plan**

Max had not yet started the Okta project plan. Mithun argued for \$40K (up from \$30K), grounded in PM hours: discovery covering channel structure, embedding, access control, and content organization (six hours), onboarding (four hours standard), remaining project management across a six-month engagement bringing the total to approximately 24–28 hours. Mithun's angle: take more margin, and offer a case study co-branding deal if Okta pushes back on price — document the migration as a go-to-market asset and use it to pitch other enterprise SaaS companies in the vertical. Farah had posted an S3-to-S3 diagram in Zoom chat — confirmed to be from Vijay's technical spec, not OE's documentation. Kara had already emailed Okta that OE will respond Monday. Plan: Mithun drafts the implementation plan (six phases: discovery, setup, dry run, migration, validation, handoff) referencing the migration document and Okta call transcript. Align with Kara Monday afternoon before anything goes out.

## Looking Ahead — Week 10 / Action Items

---

### **IFRS Monday Validation Run — The Critical Gate**

Monday morning: rerun the existing IFRS batch through transform to re-patch tags (now 40 chars, up to 30 tags), and run a new batch of five entities with captions end-to-end to validate caption behavior post-April 18th release. Both must pass cleanly before the IFRS client call Thursday. If they do, full migration begins at 200–300 entities per day.

### **Okta Implementation Plan & Quote — Due Monday**

Mithun to draft the six-phase implementation plan (discovery, setup, dry run, migration, validation, handoff) referencing the Okta discovery call transcript and migration document. Pricing to go out at \$40K or higher; detailed SOW with PM hours breakdown to justify the number. Align with Kara Monday afternoon before anything goes to Okta.

### **Multipart Upload Part-Size Limit — Formal Zoom Response**

The 100MB-per-part ceiling is confirmed for the second time. Joe's recommendation: formally push back to Zoom requesting a technical resource who can clarify the actual limit and timeline for raising it. This affects every large-file migration going forward.

### **Open Montage — XML Export Fix & Casey's Practice Files**

The XML export is currently producing HTML — reprompt needed to fix. Casey's editor training doc and practice edit files are now in hand; use them to improve the agent's segment classification accuracy and test the voice cloning/TTS splice feature. Target: bring accuracy from 90% to 95%+ before presenting to Britt.

### **Migration Bot — Joe Briefing & App Submission Path**

Emilia greenlit the migration bot concept and confirmed Zoom would welcome it on the Marketplace. Next step: brief Joe on the architecture before finalizing the build plan. Separately, explore with Vijay whether the 100-day Marketplace review process can be expedited given OE's ISV partner status.
