Weekly Report

Week 24 — Jul 27–31, 2026

Mithun Manjunatha — Sales Engineer

Open Exchange | Confidential

Week 24 Overview

Week 24 closed out the IFRS migration for good — a final reconciliation exercise resolved every discrepancy between Kaltura's UI and the migration report before source access shut off, and a parallel deep-dive into chapter and cue-point recreation gave Zoom's product team the data it needed for its own agenda-slide feature request. Mithun's role formally shifted this week as well, with Alan confirming a move to sit more directly under Joe's engineering-adjacent track as OE doubles down on AI-driven delivery across sales, product, and engineering. Okta and Indeed both progressed from planning into concrete execution — Indeed delivered channel and ownership data for a 30-video dry run, while Okta locked a dedicated architecture-mapping session — though both remain gated on Zoom's September Sites/Site Pages release. The week also opened new revenue threads outside core migration work: a CVS bulk-video-hosting proposal, DXC's departure-migration SOW pricing, and a deep technical conversation with Zoom's marketplace team about productizing OE's workflow as a native app.

IFRS Migration Formally Closes Out

A year-long thread wrapped this week — a final reconciliation exercise resolved every discrepancy between IFRS's Kaltura UI count and the migration report (down to three explainable buckets: no-media placeholders, drafts, and already-migrated errors) before source access shut off, while a parallel deep-dive into chapter and cue-point data gave Zoom's product team the analysis it needed for its own agenda-slide chapter-recreation feature.

Mithun's Role Formalizes Around AI-Driven Engineering

Alan confirmed Mithun's shift to sit more directly under Joe's engineering-adjacent track, explicitly positioning him as the connective tissue between sales, product, and engineering as OE doubles down on AI-built software company-wide. The AI-tooling push kept spreading in parallel — a Microsoft Copilot Studio knowledge-base test, early access requests for Zoom's Content Studio, and getting Devin set up with Claude API access.

Okta and Indeed Advance in Parallel, Both Gated on Zoom

Both migrations moved from planning into concrete steps this week — Indeed delivered channel IDs and service-account ownership data for a 30-video dry run, and Okta locked a dedicated architecture-mapping session — but both remain dependent on Zoom's Sites/Site Pages feature, which won't ship until after September.

New Revenue Threads Open Outside Core Migration

A CVS bulk-video-hosting proposal (~400 videos, ~\$12K estimate), DXC's departure-migration SOW pricing (\$20K–\$41K tiers), and a deep technical conversation with Zoom's marketplace PM about productizing OE's workflow as a native app all point toward diversifying revenue beyond one-off CMS migrations.

Note: Created in tandem with AI to summarize meeting notes. Every line read and verified.

Monday, July 27

8 meetings

Max/Mithun Standup — IFRS Thumbnails, Okta/Indeed Status

Reviewed IFRS's thumbnail cue-point investigation tied to Zoom's chapter-recreation ask, confirmed Okta and Indeed were both essentially handled pending Zoom's updated S3-to-S3 documentation, and mapped next steps on the City AWS delivery plan and a Salesforce/Zoom-integrations question routed to Zoom's Ren.

Internal ADP Support Ticket

A brief internal IT session resolved a calendar-sync access issue in OE's ADP Workforce Now interview-scheduling module; the likely root cause was a Friday ADP platform push, with a direct workforcenow.adp.com login workaround identified for future sign-in confusion.

OE Weekly Sales All-Hands

Company-wide pipeline and KPI review covering July's closing deals and updated team targets across capital markets, GCS, and Zoom-aligned accounts. Mithun gave a brief update confirming IFRS was wrapped and Okta/Indeed were progressing well.

Indeed Channel-Mapping Data Call

Indeed delivered channel service-account emails and channel IDs for all 6 target ZVM channels, and the group agreed on a 5-videos-per-channel (30 total) dry-run scope once Zoom access lands.

Zoom Content Studio Demo

A Zoom contact demoed the new advanced-CMS "Content Studio" AI feature, which auto-chops long recordings into bite-sized clips with generated summaries and images; Mithun floated a prompted-highlight-reel use case for IR clients and asked about early access.

ZCC Lead-Architecture Rethink

Mithun and Max reworked the ZCC lead-creation architecture, proposing to defer Salesforce lead creation to post-engagement rather than pre-engagement since nothing about the interaction needs real-time lookups for lead-gen purposes.

Alan/Amelia/Andrew — Role Change & AI Roadmap

Alan laid out OE's AI/knowledge-base roadmap (a hardened GitBook-based MCP, eventually unifying Salesforce, Lasso, NetSuite, and Teams data) and formally confirmed Mithun's shift to sit more directly under Joe's engineering-adjacent track, with variable-comp structure to be sorted separately by Andrew and Amelia.

Michael Morales — Website Revamp Talking Points

Prepped talking points for Michael's leadership pitch on a Vercel-based website rebuild, covering AI-search/agent-discoverability positioning, recent Zoom AE email-blast results (3 meetings booked), and the marketing-budget gap versus competitors.

Tuesday, July 28

7 meetings

Max/Akash/Mithun Standup

Confirmed no discrepancies in the prior day's report, reviewed Indeed's preliminary channel-ownership document, and set the dry-run plan of 5 videos across 6 channels; Mithun also chased status on the 54 zero-byte City files.

Akash — Live Migration-Bot Demo

A live demo moved 2 real videos from Kaltura to ZVM end-to-end; the team caught that the demo was pointed at Indeed's live account rather than an internal test Kaltura account and corrected course, and Mithun gave detailed UX feedback proposing a 3-phase flow modeled on his own quote-calculator site.

OE Staffing Ops Sync

Internal staffing-team meeting covering onboarding pipeline updates, a duplicate-profile cleanup issue flagged in Lasso, part-time rate-change effective dates, and a broader note that HR/finance systems integration remains manual.

Okta Channel-Review Scheduling

Locked a Thursday working session to review Okta's channel inventory together, confirmed Slack access was pending, and agreed Okta would export a full channel list ahead of that call.

Max/Mithun — IFRS Final Reconciliation

Worked through a 24-entry discrepancy between IFRS's Kaltura UI count and the migration report live with Claude, narrowing it down to three explainable buckets before Kaltura access closed for good.

Hiring Process & Staffing-Tool Exploration

Formalized the associate-SE hiring process (Mithun and Chi Wei first round, cross-functional panel second round including Joe and Devin), walked through the LinkedIn Recruiter messaging tool, and explored Microsoft Teams Shifts as a possible staffing-tool alternative.

Devin Catch-Up

Wide-ranging sync covering IFRS/Indeed/Okta status, a Zoom Content Studio access request, confirmation that the retail-investor session with Lorna moved to Thursday, ZCC support-line volume and coverage-hours planning, a review of OE's internal AI-strategy decks, and getting Devin set up with Claude API access.

Wednesday, July 29

9 meetings

Stefan (Zoom)/Max/Mithun — IFRS Chapter Scoping

Discussed how Zoom wants to recreate IFRS's agenda-slide chapter data natively rather than relying on a customer-facing feature, agreeing to prioritize by broadcast date and get Ryan's ZVM channel access set up.

Max/Akash/Kieran Standup — ZCM-224 Resolved

Akash reported 46 of the 54 corrupted City files recovered after a root-cause fix, with 8 unrecoverable; also touched on bot-demo scheduling.

Chapter-Recreation Deep Dive (ZCM-226)

A focused analysis session to identify which of roughly 675 IFRS videos have genuine multi-point chapters versus a single placeholder cue point, resulting in a new ticket to formalize the analysis for Zoom.

Staffing Tool Exploration

Discussed replacing Lasso with Microsoft Teams Shifts for staffing and scheduling, acknowledging it's a multi-month undertaking, and agreed to a shadowing exercise to document the current workflow before committing.

Zoom AE Migration-Process Simplification

Zoom AEs raised frustration with the migration-quoting process being overwhelming for both AEs and customers; the group walked through new ZVM feature updates and discussed simplifying discovery.

Quote Calculator Go/No-Go Decision

The team decided against making the pricing calculator customer-facing, given the risk of an early estimate scaring off deals, and used the session to walk new Zoom hires through OE's CMS/migration business model.

Max/Mithun — IFRS Chapter Follow-Up

Reviewed the finalized chapter-timestamp analysis (483 real chapter entries identified) and discussed the remaining blocker of getting content into ZVM given Ryan's content ownership.

Vercel Sales Call

Mithun and Michael took an introductory call with a Vercel rep covering Pro-plan pricing (~\$20/seat/month), AI infrastructure primitives, and confirmation that OE's current traffic fits comfortably within the Pro tier.

Vercel Debrief with Michael

Recapped the Vercel pricing conversation and began planning a dedicated setup session, along with the internal approval chain needed for a potential website migration.

Thursday, July 30

11 meetings

Max/Akash/Kieran Standup

Covered an overnight chapter-title breakthrough, Indeed's OAuth access blocker, Kieran's Kaltura-to-ZVM upload debugging, and the City corrupted-files AWS delivery plan.

Chapter-Title Output Quality Review

Reviewed the overnight chapter-title extraction output with Max, addressing inconsistent "Agenda Item" header detection across PowerPoint formats and weighing whether a stronger model would improve consistency.

Chi Wei 1-on-1

Discussed POC review delegation at Chi Wei's org, an update on migration-project complexity, the Vercel website-migration conversation, and confirmation that Eric (the second associate SE) starts end of August.

New Hire Intro — Pete

An introductory call with a new Zoom-team hire covering career background and OE's event-driven business model versus traditional SaaS sales, plus a licensing feature-matrix idea to help ramp new team members faster.

Retail-Investor Strategy Session

Discussed a "clipping" strategy for earnings-call content aimed at retail investors, identifying candidate clients for a pilot using Zoom's AI Studio.

Zoom Licensing Platform Training

Walked new Zoom-team hires through the differences between Webinars, Webinars Plus, and Zoom Events licensing, including the hub/hub-host access model and premium features.

Okta Channel/Site Architecture Session

The scheduled working session to map Okta's channel inventory into the new site/site-page structure, discussing retention-policy alignment and access-control models.

Microsoft Copilot Studio Knowledge-Base Test

Tested a Copilot Studio declarative agent connected to OE's GitBook knowledge base, checking whether responses stayed grounded in documented content rather than drifting to general knowledge.

IFRS Chapter Column-Detection Fix Planning

Planned a fix to detect chapter-title columns by literal header match rather than heuristic guessing, aiming for more consistent extraction across varied PowerPoint formats.

ZVM Access-Control Design & Avatar Update

Discussed ZVM's contact-groups and sites/site-pages permission model for Okta's SSO-based access control, plus an update on the AI-avatar delegation feature for earnings-call content creation.

DXC Migration Pricing Discussion

Worked through tiered pricing options (\$20K–\$41K) for helping DXC migrate data off OE's platform as they depart, based on estimated content volume and video count.

Friday, July 31

4 meetings

Max/Akash/Kieran Standup

Covered bot-deployment status, the Kaltura-to-ZVM migration fix timeline, Indeed's dry-run details, IFRS's 3-4 flagged videos needing re-migration due to a Zoom-side sync issue, and a GitHub Actions pipeline fix for the bot's Mac-vs-Linux library mismatch.

CVS Bulk Video-Hosting Discovery Call

A discovery call to scope bulk-hosting roughly 400 short pitch videos with unique-visitor analytics and frictionless public links, working through guestbook/email tradeoffs and categorization needs.

Internal CVS Pricing Debrief

Decided against a showcase page for the CVS videos in favor of client-based tagging, and landed on a ~40-hour, ~\$12K estimate for the bulk-upload work; also sized DXC's content volume for that separate SOW.

Zoom Marketplace Deep Dive with Abe

A deep technical conversation on Zoom's manifest API, Connect service for third-party API calls, and Zoom Apps sidebar components, discussing how OE's migration workflow could become a Zoom-native app tied to Vijay and Rajul's goal of scaling to 1,000 migrations by year-end.

Looking Ahead — Week 25 / Action Items

Run Okta's Channel-Mapping Working Session — Mithun/Max/Sammy

Use the exported channel inventory to jointly design the final channel/site structure, factoring in Zoom's upcoming Sites/Site Pages release.

Execute Indeed's 30-Video Dry Run — Mithun/Akash/Max

Move 5 videos per channel across all 6 channels once Zoom access and OAuth app creation come through.

Finalize CVS and DXC Pricing — Mithun/Jules/Tomaso

Send the CVS bulk-hosting quote (~40 hours man-work) and lock in DXC's tiered SOW pricing for their platform departure.

Follow Up with Zoom Marketplace/DevRel — Mithun

Continue the thread with Abe on manifest API vs. Connect service architecture, and loop in Will Worthington on security/waiver requirements ahead of the August MVP app submission.

Continue Migration Bot UX Redesign — Mithun/Akash

Implement the 3-phase source-selection/discovery/permissions flow and get internal Kaltura test account credentials sorted so future demos don't touch live client data.
