# Weekly Report

Week 25 — August 3–7, 2026

Mithun Manjunatha — Sales Engineer

Open Exchange | Confidential

## Week 25 Overview

Week 25 centered on three execution tracks: operationalizing the Indeed and City video migrations (30-video dry-run planning, ZVM API integration, channel access controls), advancing AI production tooling (Edgar's VPS infrastructure, Casey's Perfect Cut editing skill, the FitScore attendee-qualification tool), and validating the staffing console prototype with real operators to inform a build-vs-buy decision. Deal velocity stayed strong with OmniAB's \$51K closure, and the ComputerShare FitScore pilot advanced toward a customer demo. Governance decisions around AI-tooling infrastructure and spend were escalated to leadership, with VPS spend cleared and a GitHub-repo packaging standard set for future proof-of-concepts.

### Video Migration Operationalization

Indeed and City migrations moved from planning to active pipeline validation this week. Max's video-to-channel mapping spreadsheet, ZVM API troubleshooting, and Friday dry-run readiness represent the operational pathway to delivering both customer migrations on schedule, with collaborator-access patterns, S3 bucket permissions, and cue-point API integration establishing a repeatable migration template.

### AI Tooling and Infrastructure Governance

Edgar's VPS infrastructure, Casey's Perfect Cut editing skill, and the FitScore qualification tool moved from experimentation toward production infrastructure. VPS spend was cleared by CISO/leadership, a GitHub-repo-plus-README packaging standard was set for AI proof-of-concepts, and the UBS prerecord project needed data processor/controller classification before it could ship.

### Staffing Console Validation and Build vs. Buy

Deep-dive interviews with Kevin (UK/EMEA), Annalisa (ops lead), and Emily surfaced quantified pain points -- manual reassignment, timing errors, recurring sync failures, and no recurring-unavailability tracking -- that are shaping the staffing console's MVP scope. Joe's direction to evaluate existing shift-management platforms before building signals real urgency behind this decision.

### Partner Sales and FitScore Engagement

OmniAB's \$51K deal closed and the ComputerShare FitScore pilot advanced toward a customer demo. Support-line metrics (50% first-engagement close rate, ~\$1M pipeline) and steady BDR tool adoption point to a healthy sales motion heading into September prep.

*Note: Created in tandem with AI to summarize meeting notes. Every line read and verified.*

## Monday, August 3

*9 meetings*

### **Weekly Sales Update -- OmniAB**

The OmniAB deal (\$51K) closed, hitting weekly revenue targets. The team reviewed pipeline KPI performance, discussed BDR tool investment (Ducks), and reviewed current Zoom AE channel coverage.

### **Bot Demo and Video Mapping**

Akash confirmed bot V2 development is tracking with multiple field types ahead of a scheduled demo. Max presented a video-to-channel mapping spreadsheet for Indeed's 30-video dry run, covering caption format and metadata variance across five videos per channel. The team confirmed 44 corrupted City files were unrecoverable and added zero-byte validation to the upload pipeline, and configured server-to-server OAuth for Indeed's account.

### **Pause Zoom App Build**

Mithun told Akash to pause the Zoom app build and prioritize reviewing Zoom Connect documentation, driven by pending API capability validation ahead of City's access timing.

### **Video Pipeline Dry Run Planning**

Max walked the team through the 30-video dry-run logistics -- channel assignment, caption/metadata enrichment, and error tracking -- targeting a Friday/Monday demonstration to Indeed.

### **VIP Event Staffing Strategy**

The team reviewed staffing tiers, redemption-event capacity, and the OE staffing console prototype's readiness, incorporating Annalisa's operational input against existing Lasso workflows.

### **Replay Library and Quiz Setup**

The team worked through MOFO/CLE quiz integration, passport library structuring, and OE Stream project duplication, with CEU reporting compliance requirements discussed.

### **Zoom Per-Video Publishing Issue**

Indeed, Jacob, and Skyler discussed ZVM channel publish controls and content-library access, centering on per-video publishing granularity and the administrative ownership model for migrated content.

### **OpenExchange FitScore Integration Discussion**

The team reviewed the ComputerShare FitScore pilot scope -- attendee data scrubbing and 12 earnings calls as initial test data -- framing FitScore as a downstream post-earnings engagement driver.

### **AI Intern Interview -- Rachel (Pacero)**

Mithun interviewed an SDSU candidate on Copilot Studio bot development and web-scraping experience for the AI internship pipeline.

## Tuesday, August 4

*5 meetings*

### **Zoom Migration and Bot Update**

Akash confirmed Zoom Connect readiness; Kiran tested the Kaltura-to-Zoom migration pipeline with 10 videos. City S3 bucket access timing was confirmed, bot MVP V2 was targeted for August 20, and two ZCM tickets were closed.

### **AI Editing Workflow Planning**

Casey demonstrated the Perfect Cut skill for earnings-call video editing, producing XML output with slide detection and spacing rules. Mithun outlined a three-phase rollout plan: prove locally, stand up on VPS, then operationalize for editors.

### **Live Stream Device Inventory**

The team reviewed live-stream device inventory, targeting 5 units on hand ahead of September's busy event season.

### **FitScore Demo Planning Session**

Devin, Amelia, and Mithun discussed the FitScore proof of concept -- the attendee-report scrubbing skill and a 24-hour post-earnings client email cadence -- with Mithun set to share the relevant Claude skill.

### **ZVM Access Control Discussion**

Indeed and Max compared contact groups vs. user groups and Okta push-group integration for ZVM channel permissions. Zoom's sites feature was confirmed for a September 15 release, and offboarded-employee clip-ownership transfer policy was clarified.

## Wednesday, August 5

*6 meetings*

### **ZVM API Discovery and Channel Access**

Akash, Kiran, and Max troubleshoot a ZVM channel-assignment API issue requiring collaborator access, reviewed metadata patch sequencing, and documented findings in a ticket for future reference.

### **Zoom Bot App Submission Planning**

Mithun and Akash reviewed Zoom Connect form-field specs and mobile-support requirements for bot V2, targeting an August 10 internal demo and August 20 MVP.

### **Staffing Deep Dive -- Kevin**

Mithun interviewed Kevin, a senior staffing manager covering UK/EMEA, on end-to-end staffing workflow in Lasso and Teams, including client-specific staffing exclusion rules and persistent pain points: manual reassignment, timing errors, recurring sync failures, and no recurring-unavailability tracking. Mithun demoed the staffing console prototype for feedback.

### **Edgar VPS and AI Tools Discussion**

Mithun briefed Chiwei on AI tooling being built for OE (caption conversion, transcript/video quality checks, and voice-clone infrastructure for UBS prerecords) and on VPS spend approval (~\$1K). The discussion flagged infrastructure-governance and data-residency concerns and escalated the topic to Joe and Alan for policy review.

### **Michael Morales -- Claude Code Setup**

Mithun helped Michael set up Claude Code CLI, GitHub, and Vercel MCP access for the OE website redesign project, including a private GitHub repo and an approved \$80/month Vercel budget for 4 seats.

### **Edgar VPS Connection Session**

Mithun and Edgar connected to the VPS via RDP after troubleshooting network and IP configuration, and discussed Ollama/Hermes/Claude integration options for the runtime.

## Thursday, August 6

*7 meetings*

### **ZVM Bot and City Standup**

Akash reported the bot deployment blocked by a GitHub Actions issue (DevOps ticket open); ZVM migration was waiting on Indeed collaborator access, and City S3 access was followed up on.

### **Engineering/Product -- Joe Sync**

Joe, Chiwei, and Mithun aligned on hiring-pipeline status, a GitHub-repo-plus-README POC packaging standard, Edgar's VPS infrastructure (CISO-confirmed), the UBS prerecord project's data processor/controller classification, and the OE website-redesign disaster-recovery plan. Joe directed evaluating existing shift-management software before building a custom staffing tool.

### **Zoom Partner Sales Weekly**

Standup covered BDR updates, support-line metrics (44 sessions, 16 unique visitors, 1:36 average wait, 50% first-engagement close), FitScore customer confirmations, pipeline at roughly \$1M, and September prep across several accounts.

### **Michael Morales -- Website Followup**

Michael confirmed Claude Desktop was connected to GitHub/Vercel overnight. Mithun walked through domain handoff, a dependency check on existing integrations, and GitHub repo/session-management basics, with the next check-in set for Wednesday 2pm.

### **Annalisa -- Staffing Console Demo**

Mithun demoed the staffing console prototype (event dashboard, operator browser, client-role matcher, budget view) to Annalisa, who flagged needed filters (date, client, event type, status, urgency, complexity), visibility into meeting arrival times, and integration with reporting tools.

### **Edgar, Casey, Mithun -- AI Production Sync**

First joint sync on the AI video-editing pipeline. VPS infrastructure was cleared by leadership; Casey demoed Perfect Cut skill output, and the UBS deal was clarified as transcript summarization rather than voice cloning. The team settled on VPS for storage, Vercel for front-end, and GitHub for code.

### **Devin -- FitScore Skill and Zoom Clips Demo**

Mithun updated Devin on the AI video project and demoed the FitScore attendee-qualification skill along with Zoom's auto-clip feature. Claude Code CLI was installed on Devin's machine, and a FitScore demo with Brendan was scheduled for Monday.

## Friday, August 7

*7 meetings*

### **Workforce Scheduling Tool Discussion**

The team discussed staffing/workforce scheduling tool requirements, weighing a Lasso replacement against existing shift-management platforms versus a custom-built console.

### **Video Migration Ownership Review**

The team reviewed video ownership mapping for the migration process, including channel-assignment logic and admin-vs-user ownership models, to ensure consistent ownership transfer during migration.

### **Migration and Integration Sync**

Kiran, Max, and Mithun synced on the Indeed dry-run status, confirmed a ZVM API collaborator fix, coordinated the City S3 bucket handoff, and reviewed Kaltura app token generation.

### **Mithun -- Quick Task Confirmation**

Mithun confirmed cross-project status across bot demo prep, staffing console next steps, the Edgar VPS/AI production sync, Monday's FitScore demo, the website redesign handoff, and the Indeed dry-run timeline.

### **Staffing Process Discussion with Emily**

An hour-plus deep dive with Emily on her staffing workflow in Lasso, role matching, client-specific rules, and recurring pain points including no auto-reassign capability and no recurring-unavailability tracking. Mithun demoed the staffing console prototype and collected detailed filter and view feedback.

### **Investigating Video Cue Points**

Mithun, Akash, and Max investigated the ZVM cue-points API for chapter-marker support, confirming the data is available via API for inclusion in the migration pipeline.

### **Hybrid Engineer POC Strategy**

Mithun, Joe, and Chiwei held an end-of-week strategy review covering the hybrid-engineer POC packaging standard, the staffing-tool vendor-vs-build decision, Edgar VPS governance, the website-redesign go-live plan, and FitScore next steps with ComputerShare.

## Looking Ahead -- Week 26 / Action Items

---

### **Bot MVP Demo and Deployment -- Akash**

Target August 10 internal demo and August 20 MVP release; unblock the GitHub Actions deployment issue and finalize Zoom Connect form-field specs.

### **Indeed 30-Video Dry Run Demonstration -- Max**

Deliver Monday, confirm ZVM channel assignment and cue-point API integration, and document edge cases for the parallel City track.

### **FitScore Demo and ComputerShare Expansion -- Devin / Mithun**

Monday 3:30pm demo to validate attendee qualification and the 24-hour follow-up cadence, then scope ComputerShare partnership expansion terms.

### **Staffing Tool Vendor Evaluation vs. Build Decision -- Mithun / Joe**

Compile Kevin, Annalisa, and Emily feedback into a vendor evaluation, identify 2-3 shift-management platform candidates, and deliver a build-vs-buy recommendation by end of August.

### **AI Production Pipeline Baseline -- Casey / Edgar**

Generate 5-10 golden earnings-call examples to validate the Perfect Cut skill, stand up the VPS environment, and lock in the weekly AI production sync.
